

SharpWhite sanding film disc - Ø 150mm - multihole

SFDC

SharpWhite is made of a new type of ceramic aluminium oxide with a high initial cutting power for efficient sanding. Because of its high cutting speed, this premium abrasive saves significantly on labour! The white, anti-clogging coating makes sure the abrasive is durable and the multi-hole feature guarantees a dust free environment.

SharpWhite sands up to 20% faster than the average sanding disc. Using SharpWhite significantly reduces labour costs and allows technicians to do more repairs. More repairs lead to more revenue and a greater use of invested equipment and spray booth, allowing a faster return on investment.

- Longer disc life; white, anti-clogging coating that helps keep the disc from loading up during sanding
- Excellent dust extraction due to the multi-hole pattern
- Adapted to the latest paint systems; works perfectly on air-drying primers, scratch-resistant clearcoats and UV cured paints
- Ultra flat film backing; results in a consistent scratch pattern
